### **DETAILED ACTION**

1. The amendment filed 6/22/05 has been considered in preparing this Office action.
2. Claims 4 and 5 are objected to because of the following informalities: The original claims 4 and 5 were depending from indep claim 1. The latest claims 4 and 5 are depend from claim 12. Appropriate correction is required.
3. Claim 25 is objected to because of the following informalities: Since the previously filed after Final amendment has been entered (see paragraph 1 of the non-Final Office action mailed 7/12/04), claim 25 has been amended to be an independent claim. If applicant prefers claim 25 backs to be a dependent claim again, an amendment to the claim is required, such as, depends from claim 34. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claim 25 is rejected under 35 U.S.C. 102(e) as being anticipated by Airey et al (6,650,327 hereinafter "Airey").

Airey teaches a buffering apparatus (Fig. 2) comprising producing graphics floating point data in a graphics pipeline (abstract); operating on the graphics floating point data in the graphics pipeline (Fig. 2); and storing the graphics floating point data in a buffer (frame buffer 140 and texture memory 507); wherein the graphics floating point data includes fragment data (col. 7, lines 17-28) received from a rasterizer (138) that is read and stored in an unclamped format (col. 7, lines 57-63, col. 8, lines 1-14 and col. 9, lines 9-23) dictated by a graphics application program interface (col. 6, lines 31-40) for increasing a parameter selected from the group consisting of a precision and a range of the graphics floating point data (abstract, col. 4, lines 33-37, col. 7, line 29 to col. 10, line 25). Therefore, at least claim 25 is anticipated by Airey.
